Aidéo TECHNOLOGIES

Mid-Revenue Cycle Business Intelligence

Challenge

Create visibility and actionable business intelligence for managing coding operations in Mid-Revenue Cycle.

Specialty

All Medical Specialties

Client

RCM Aggregators and Large Practice Management Groups

Solution

Gemini Coder Platform with Gemini Tracking

Outcomes

- Visibility gained to mid-revenue cycle process, easily identifying where every claim is in process.
- Auto-calculate coding velocity as time needed to complete current claim volume with current resources.
- Business intelligence to manage global coding teams with ability to monitor individual coders and teams.
- Easily load balance your coding team to maximize resource deployment.

Overview

Aggregating all of your claim data through the Gemini Coder Platform not only creates efficiency for your medical coding team but also creates the opportunity for next generation analytics and tracking for RCM managers.

Working with the Aideo Customer Advisory Board, Gemini Tracking was created to offer real-time business intelligence that provides next-generation visibility into coding operations and team performance.

Analytics & Tracking
